Product Description

Remote Control Radio Shuttle Racking System for Industrial Warehouse Storage Solutions

Product Description

QiFei SHUTTLE RACKING SYSTEM:

The shuttle racking system is a high-density storage system composed of racks, remote-controlled shuttles and forklifts. Utilizing the characteristics of the shuttle car itself, combined with the son and mother car, stacker, warehouse management software, etc., the system can be transformed into a shuttle stereoscopic ware-house system.

It is suitable for storing large quantity of goods with less types, goods of batched working and small range of selection. The goods are stored on the support guide rail with the pallet one after another in the direction of depth, increasing the space availability. It is quite convenient for fork truck drives into lane directly to store or take out the goods.

Compared with **Drive-in racks**, the forklift does not need to enter the tunnel of **shuttle racks**, saving operation time, and the space utilization rate is over 80%, which improves the quality of personnel and goods.

Drive-in racks

VS

Shuttle racks

The shuttle rack can adopt both **FIFO & FILO**, the operation mode is flexible, which greatly improves the work efficiency when checking the goods.
