

## Heavy Duty Push Back Pallet Racking System For Warehouse Storage Height 5-15m Customized

### Our Product Introduction

for more products please visit us on [warehouse-rackings.com](http://warehouse-rackings.com)

#### Basic Information

#### Product Specification

- Model NO.: QF-Push Back Racking
- Material: Steel
- Structure: Rack
- Type: Pallet Racking
- Mobility: Fixed
- Height: 5-15m
- Weight: 100-1000
- Closed: Semi-closed
- Development: New Type
- Serviceability: Common Use
- Color: Customized
- Lead Time: 20 Days
- Raw Material: Q235B
- Surface Treatment: Galvanized/Powder Coating
- Transport Package: Standard Export Packing

## Product Description

### Product Description

#### QiFei Push-back racking:

Push-back racking is a type of warehouse storage system that allows for efficient use of floor space by allowing pallets to be stored multiple deep.

The key advantages include:

**Increased storage density:** By allowing pallets to be stored multiple deep, push-back racking can increase storage capacity by 30-50% compared to standard selective pallet racking.

**Efficient forklift operations:** The sloped rail and nested carts make it easy for forklifts to load and unload pallets, improving productivity.

**Damage reduction:** The nested cart design helps protect the stored goods from potential forklift impacts.

#### Required information for quote

- 1, The AUTOCAD drawing or draft drawing of warehouse or racking.
- 2, Length, Height, and Width of the warehouse.
- 3, Layers of the racking
- 4, Pallet size.
- 5, Max weight of pallet with cargo on.
- 6, Color requirement.

### Detailed Photos

#### 1. Sloped rail system:

The racking has a slight downward slope, allowing pallets to be easily moved in and out.

## 2. Nested carts:

Wheeled carts are used to hold the pallets. These carts can be nested within each other, allowing multiple pallets to be stored in the same storage location.

## 3. Last-in, first-out (LIFO) operation:

The last pallet loaded on the sloped rail can be retrieved first, suited for warehouses with consistent inventory turnover.

Push-back racking is commonly used in retail distribution centers, manufacturing facilities, and cold storage warehouses.

It provides an excellent balance of storage density, accessibility, and operational efficiency.
